OFFICIAL WHITEPAPER · VERSION 2.0

OPEN MOUTH SIMBA

A fair-launch community memecoin on Solana. Fixed supply, burned liquidity, revoked authorities — every claim in this document can be checked on-chain.

TICKER $ OMS · NETWORK SOLANA · LAUNCHED 22 MAY 2026 · PUBLISHED 19 AUGUST 2026

SECTION 01

OVERVIEW

$ OMS is built around Simba, a real German Shepherd who barks at everything and stops for nothing. The tagline is literal: the dog that never shuts up.

Open Mouth Simba launched on Pump.fun on 22 May 2026 as a fair launch — no presale, no private round, no team allocation. Every token entered circulation through the same public bonding curve, at the same terms, for everyone.

The project makes no claim to technical innovation. $ OMS is a standard SPL token on Solana. What it offers instead is a set of structural guarantees that can be checked by anyone, in a category where most projects ask to be trusted rather than verified.

1.1 WHAT THIS DOCUMENT IS FOR

This whitepaper exists so that anyone evaluating $ OMS — a holder, a prospective buyer, or a listing platform — can find every material fact in one place, with a link to verify each one independently. It records what has happened. It does not forecast what will happen.

1.2 WHAT THE FAIR-LAUNCH STRUCTURE REMOVES

Most memecoin losses come from a small number of structural failures, not from market movement:

- A team allocation that is sold into the community's buying
- A presale that lets insiders enter below the public price
- Retained mint authority, allowing new supply to be created at will
- Retained freeze authority, allowing wallets to be locked
- Liquidity that the deployer can withdraw at any moment

All five are closed on $ OMS. Section 4 shows how to confirm each one yourself.

SECTION 02

TOKEN INFORMATION

Token name	Open Mouth Simba
Ticker	$ OMS
Blockchain	Solana
Token standard	SPL Token
Supply at launch	1,000,000,000
Current supply	965,976,228 — reduced at graduation, permanently fixed
Decimals	6
Launch date	22 May 2026
Launch platform	Pump.fun (bonding curve)
Current venue	PumpSwap — graduated 22 July 2026
Also available on	Coinbase (listed DEX asset)
Contract address	`9JQBTeBfr3VGnEoVhRRYMzwMczNWzHkdmXjwmwvJpump`
Mint authority	**REVOKED**
Freeze authority	**REVOKED**
Liquidity	**BURNED — 17.58 of 17.58 SOL**

> **One address only.** The contract address above is the sole legitimate $ OMS token. Any other address is not $ OMS, regardless of who sends it to you or what it is called.

SECTION 03

SECURITY AND VERIFICATION

Each row below states a protection and how to confirm it independently. None of it requires trusting this document.

PROTECTION	WHAT IT MEANS	HOW TO VERIFY
Mint revoked	No new $ OMS can ever be created. Supply can only go down, never up, so your share cannot be diluted.	Solscan → token page → Authorities
Freeze revoked	No wallet can be frozen or blacklisted. You keep full custody and can always move or sell your tokens.	Solscan → token page → Authorities
Liquidity burned	17.58 SOL of liquidity was burned at graduation. The LP tokens no longer exist, so the pool cannot be withdrawn by anyone — including the deployer.	Solscan → LP burn transaction
No team allocation	No tokens were reserved. There is no insider wallet holding a position acquired outside the public curve.	Solscan → Holders distribution
No presale	No one bought below the public opening price. The bonding curve opened to everyone simultaneously.	Pump.fun → full trade history

SECTION 04

SUPPLY AND DISTRIBUTION

ALLOCATION	SHARE	TOKENS
Public fair launch	100%	1,000,000,000
Team / development	0%	0
Presale / private round	0%	0
Marketing / treasury	0%	0

> **Supply was reduced at graduation.** The table above shows distribution at launch. When the bonding curve completed on 22 July 2026, the tokens remaining on the curve were burned along with the liquidity, taking total supply from 1,000,000,000 to **965,976,228**. Because mint authority is revoked, that figure cannot increase — it can only fall further if tokens are burned again.

4.1 HOW THE LAUNCH WORKED

Pump.fun's bonding curve sets price algorithmically: each purchase raises the price for the next buyer, and each sale lowers it. There is no order book and no market maker during this phase. The deployer has no privileged access to the curve.

When the curve completed, the accumulated liquidity was deployed to a PumpSwap pool and the LP tokens were burned automatically by the protocol. This is executed by Pump.fun's program, not by a human — which is why it cannot be skipped, delayed, or reversed.

> **Note on the funding of this project.** There is no treasury. Marketing, hosting, contest prizes, and tooling are paid personally by the operator. There is no allocation set aside to fund them, and none will be created.

SECTION 05

WHAT HAS ACTUALLY HAPPENED

This section records events, with dates. It contains no projections.

DATE	EVENT
22 May 2026 Day 1	$ OMS deployed on Pump.fun. Fair launch, zero presale, zero team allocation. Mint and freeze authorities revoked.
May – July 2026	Community built across seven platforms: X, Telegram group and channel, Instagram, TikTok, Discord, and the Pump.fun community page. Daily content published throughout.
22 July 2026 Day 61	Bonding curve completed. $ OMS graduated to PumpSwap. Liquidity burned: 17.58 of 17.58 SOL, and total supply reduced from 1,000,000,000 to 965,976,228. A rug pull became structurally impossible from this point.
22 July 2026	Volatility event on graduation day — documented in 6.1 below.
July 2026	$ OMS listed on Coinbase as a DEX asset, making it purchasable without a self-custody wallet.
July – August 2026	Simba Chase released — a free browser game and Telegram mini-app built for the community.
1 – 8 August 2026	First community meme contest run and paid out publicly to three winners.

5.1 THE GRADUATION-DAY VOLATILITY EVENT

It matters more that this is recorded than that it is flattering, so it is stated plainly.

Shortly before the bonding curve completed on 22 July, a single wallet purchased approximately 383.8 million tokens in one

transaction. This pushed the price to its all-time high. Roughly one hour later, the same wallet exited its position, and the price fell sharply.

This was a trader entering and exiting a thin market — behaviour that is legal, common on Pump.fun, and impossible to prevent on a permissionless bonding curve. It was **not** a rug pull, and the distinction is verifiable rather than rhetorical: the liquidity was burned in the same graduation event and remains burned. No liquidity was or can be withdrawn. The full sequence is visible in the on-chain transaction history.

It is included here because a document that records only favourable events is not a record. Anyone evaluating $ OMS should know this happened and be able to check it.

SECTION 06

WHAT COMES NEXT

> **Nothing in this section is a promise, a commitment, or a schedule.** Memecoin roadmaps with dated milestones are, in practice, marketing. This project does not publish them.

Current work, stated as work rather than as guarantees:

- **Community growth** — daily content across all active platforms; growing the Telegram group and Discord server
- **Data-aggregator listings** — submissions to CoinGecko and other trackers are in progress. These are applications, decided by third parties, and may be rejected
- **Simba Chase** — continued development of the community game
- **Community events** — further contests in the format already run

6.1 IDEAS THAT HAVE BEEN DISCUSSED

Community members have raised merchandise and a tie-in with German Shepherd rescue organisations. These are ideas under discussion. They are not funded, not scheduled, and not committed to, and this document should not be read as an undertaking to deliver either.

$ OMS does not offer revenue sharing, profit distribution, staking rewards, dividends, or any form of return to holders, and no such mechanism is planned.

SECTION 07

COMMUNITY

The $ OMS community is called **The Pack**. It is the entire substance of the project: there is no product, no revenue, and no roadmap — there are people who show up.

PLATFORM	HANDLE	PURPOSE
Telegram (group)	`t.me/OMSimbatoken`	Main community discussion
Telegram (channel)	`t.me/openmouthsimba_channel`	Official announcements
X	`@openmouthsimba`	Daily updates
Discord	`discord.gg/cKvs7nfm`	Channels for trading, memes, missions
Instagram	`@openmouthsimba`	Visual content
TikTok	`@openmouthsimba`	Video content
Pump.fun	`Community page`	On-chain discussion

> **Security notice.** Nobody representing $ OMS will ever message you first asking for wallet access, seed phrases, private keys, or a payment of any kind. Announcements and contest results are published publicly on the official channels above. Treat any unsolicited direct message claiming to represent this project as a scam.

SECTION 08

TECHNOLOGY

8.1 SOLANA

$ OMS is an SPL token on Solana, chosen for sub-second transaction finality and fees typically well under one cent — which makes small, frequent community transactions practical in a way they are not on higher-fee networks.

8.2 PUMP.FUN

Pump.fun's bonding-curve launchpad was used for launch. The platform sets price algorithmically, gives the deployer no pre-launch position, and handles graduation and the LP burn programmatically at completion.

8.3 PUMPSWAP

On completing the curve, $ OMS graduated to PumpSwap, Pump.fun's own automated market maker. Pump.fun graduated tokens to Raydium until March 2025, when it moved graduations to PumpSwap; $ OMS launched after that change and has therefore never traded on Raydium. Any material stating otherwise is outdated.

8.4 NO CUSTOM CODE

$ OMS deploys no custom smart contract. It is a standard SPL token using Pump.fun's audited launch program. This is stated as a fact, not a feature: there is no bespoke contract to fail, and equally no bespoke functionality.

SECTION 10

RISK AND DISCLAIMER

$ OMS is a memecoin. It is held for the community and the culture around it, not for yield, revenue, or any expected return. This section sets out plainly what that means.

10.1 WHAT $ OMS IS NOT

$ OMS grants no ownership, no claim on any asset, no governance right, and no entitlement to any payment. There is no revenue sharing, no staking programme, no dividend, and no yield, and none is planned. It is not a security, and it is not represented as an investment product.

10.2 RISK FACTORS

The following is not exhaustive, and applies to this asset as it does to the category generally:

- **Value.** $ OMS may lose some or all of its value.
- **Volatility.** Price can move sharply in either direction over short periods, as it did on 22 July 2026.
- **Liquidity depth.** The pool is small relative to major assets. A large order can move the price, and a large position may not be exitable at the displayed price.
- **Concentration.** Holdings sit across a limited number of wallets, and a large holder selling can affect price. Distribution is public on Solscan and can be checked at any time.
- **Key-person dependency.** The project is operated by one person. If that person became unavailable, content and community management would stop. The token itself would continue to exist and trade — burned liquidity and revoked authorities do not depend on anyone's continued involvement.
- **Third parties.** The project relies on Solana, Pump.fun, PumpSwap, and hosting and social platforms it does not control. Any of these may change terms or restrict access.
- **Regulation.** Digital-asset rules differ by jurisdiction and continue to develop, which may affect the ability to hold or trade $ OMS in some places.
- **Impersonation.** Fake accounts and fake contract addresses targeting this project exist. Confirm the contract address in Section 2 before every transaction.

10.3 DISCLAIMER

This document is informational. It is not financial, investment, legal, or tax advice, and it is not an offer or solicitation to buy or sell anything. Past price movement does not indicate future price movement, and no person or entity connected to this project guarantees any outcome.

Participate with an amount you are comfortable losing, and do your own research first.
